Janet Rae-Dupree, Pat DuPree : Anatomy and Physiology Workbook For Dummies before purchasing it in order to gage whether or not it would be worth my time, and all praised Anatomy and Physiology Workbook For Dummies:

5 of 5 people found the following review helpful. Genius!By jaciThis helped me get through a class that is already difficult in itself, but when you include an instructor that is never on subject and is always correcting himself ("cervical has 12 vertebrae, i mean thoracic has 12 and cervical has 5 or i mean lumbar has 5, cervical has 7..."), it's even more complicated. This book helped me pass with a B...of course I wanted an A but this instructor doesn't give A's and makes it impossible to get one. Tests only, the homework is objective so you have to argue with him to get a better grade on it if you don't agree, and no extra credit or any kind of points to add into the tests. So, a B was fine I guess, but I wouldn't have gotten that without this books help.5 of 5 people found the following review helpful. A fantastic way to reinforce APBy Secret Penguin NinjaI used this in conjunction with my Principles of Anatomy

Physiology (Tortura) and did fabulously in the class as a result. AP is a tricky course, and some study aids can do more harm than good. This is not one of them, this one will really help you to retain and understand how everything works and why. 2 of 2 people found the following review helpful. Great book! By Lorene Love this book. I bought this book to study for the excelsior AP I and II test to transfer credits to another college. I recommend this book for test taking or for students taking AP for the first time. I passed the excelsior and for that I'm very happy for this book. Buy it is worth it!!

An excellent primer for learning the human body An anatomy and physiology course is required for medical and nursing students as well as for others pursuing careers in healthcare. Anatomy Physiology Workbook For Dummies is the fun and easy way to get up to speed on anatomy and physiology facts and concepts. This hands-on workbook provides students with useful exercises to practice identifying specific muscle groups and their functions, memory exercises, as well as diagrams and actual demonstrations that readers can personally enact to illustrate the concepts.

From the Back Cover From the skeleton to skin to its systems get a grip on the human body Pursuing a career as a health care professional? Need to understand how the human body works? No problem this hands-on workbook gets you up to speed in anatomy and physiology facts in a focused, step-by-step manner. From cells and tissue to the specific muscle groups to the largest organ (the skin), this easy-to-follow primer helps you understand the intricacies of the body and how all its systems work together. Quick refresher explanations Step-by-step procedures Hands-on practice exercises Ample workspace to work out problems Tear-out Cheat Sheet A dash of humor and fun See How To Reinforce your knowledge through memory exercises Keep track of confusing terms with strategies for fast translation and understanding Know what instructors tend to emphasize on exams About the Author Janet Rae-Dupree has been covering science and technology in Silicon Valley since 1993 for a number of publications, including U.S. News World Report, BusinessWeek, the San Jose Mercury News, and the Silicon Valley/San Jose Business Journal. She was a frequent guest on cable channel Tech TV's Silicon Spin technology talk show, and she was part of the Pulitzer Prize-winning team at the Los Angeles Times covering the city's riots in 1992. During the 2005-2006 academic year, Janet was a John S. Knight Journalism Fellow at Stanford University, where she studied human biology and researched innovation and market transfer. She freelances for various publications, working from her home in Half Moon Bay, California, where she lives with husband, Dave Dupree, and their 9-year-old son, Matthew (although a 19-year-old calico cat named Trillian actually rules the roost). Pat DuPree taught anatomy/physiology, biology, medical terminology, and environmental science for 24 years at several colleges and universities in Los Angeles County. She holds two undergraduate life science degrees and a masters degree from Auburn University and conducted cancer research at Southern Research Institute in Birmingham, Alabama, before joining the Muscogee Health Department in Columbus, Georgia. In 1970, she moved to Redondo Beach, California, where she was a university instructor and raised her two sons, Dave Dupree and Mark DuPree. Now Pat is retired and lives on lovely Pine Lake in rural Georgia with her husband, Dr. James E. DuPree.
