Siamak Najarian, Javad Dargahi, Ali Abouei Mehrizi : Artificial Tactile Sensing in Biomedical Engineering (McGraw-Hill Biophotonics) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Artificial Tactile Sensing in Biomedical Engineering (McGraw-Hill Biophotonics):

0 of 0 people found the following review helpful. Five StarsBy Marsha RosenbergerAS promised0 of 0 people found the following review helpful. excellent.By Athenasend it to my teacher as a gift, Received as described. feel good . This product has great balance and weighting to it. I was impressed with the packaging and the product itself is impressive, especially given the price. I would absolutely recommend purchasing this product to others. fast and in time,

Master Artificial Tactile Sensing Design for Biomedical Engineering ApplicationsFilled with high-quality photographs and illustrations, including some in color, this definitive guide details the design and manufacturing of artificial tactile systems and their applications in surgical procedures. Artificial Tactile Sensing in Biomedical Engineering explains the fundamentals of the human sense of touch and the latest techniques for artificially replicating it. The book describes the mechanistic principles of static and dynamic tactile sensors and discusses cutting-edge biomedical applications, including minimally invasive surgery, tumor detection, robotic surgery, and surgical simulations. Artificial Tactile Sensing in Biomedical Engineering covers: Capacitive, magnetic, inductive, conductive elastomeric, optical, and thermal sensors

About the AuthorSiamak Najarian, Professor of Biomedical Engineering, Amirkabir University of Technology, Tehran, Iran. Javad Dargahi, Ph.D., is an Associate Professor in the department of mechanical engineering at the University of Concordia. Ali Abouei Mehrizi, M.Sc. of Biomedical Engineering, Research Associate, Amirkabir University of Technology, Tehran, Iran.
