Janine Roberts : Fear of the Invisible before purchasing it in order to gage whether or not it would be worth my time, and all praised Fear of the Invisible:

2 of 2 people found the following review helpful. I recommend that you read itBy BEN Aan interesting book about the so call plague of our time. the book puts in doubt the existence of AIDS. I recommend that you read it.3 of 3 people found the following review helpful. Unknown but Crucial Information for AIDS researchersBy Roy TuckmanValuable data - the publication of Dr. Gallo's edited notes is invaluable and if ever publicized should eliminate the fiction of

HIV, the only great medical discovery which is unaided by any scientific backing. 1 of 1 people found the following review helpful. Text book I will be using in acupuncture classes. By Sally W. Rickolt The book arrived in the condition as stated. It will be one of the books that I will be using next semester in my acupuncture classes.

This book takes its readers on a journey into the very heart of the hunt for viruses - to the key experiments originally performed to prove that these invisibly small particles are the cause of diseases previously blamed on toxins or bacteria and into the latest research. It sheds light on the extraordinary assumptions that underlay much of this research - and on the vaccines that developed from this. The author, an investigative journalist who has researched and produced investigative films for the BBC, American and Australian television, was asked by parents with children severely ill after vaccination, to discover if the medical authorities were hiding anything from them. She agreed, but had no idea how long this search would take. She expected at best to uncover a small degree of contamination. On the ensuing decade-long journey of discovery, she learnt it is not just the added mercury that we have to worry about. She discovered that the top government scientists admit to colleagues that vaccines are contaminated with viruses from chickens, humans and monkeys, with RNA and DNA fragments, with 'cellular degradation products', and possibly 'oncogenes and prions.' They report alarmingly that it is impossible to commercially purify vaccines. They express great concerns, but the public is not told despite the possible consequences for long-term public health. A recent US court decision has linked autism with vaccine contamination. The author cites her sources by name - and gives references and Internet links where they are available. She reveals evidence that the World Health Organisation has discovered the MMR vaccine is contaminated with chicken leukosis virus, but has decided not to tell the public of this, and to continue to make the vaccine with eggs from contaminated chickens. She reports US biowarfare researchers tried to create new agents to destroy our immune systems - and worked on a bacterium to make it a hospital superbug. Did they manage to create HIV? A senior professor told her that the vaccine program was so contaminated that HIV might well have spread though it without any need for military intervention. She set out to find the evidence to resolve this, and to learn how HIV apparently spread so far and fast. She needed to know more about this virus so went to the foundation research widely held today to have found HIV and proved it caused AIDS. She was then rocked to discover that this same research was investigated for scientific fraud for a five year period by powerful US scientific institutions and by Congress. Why is this not widely known? She found their reports and discovered they found major errors in this research, some so serious that these made it impossible to repeat these experiments and thus to verify them! She reveals the evidence unearthed - reproducing key documents so the reader can assess them for themselves. This is explosive material. In the final part of this book the author reports recent research that is revolutionising biology and offering much hope for the future. These new developments shed new light on the relationships between our cells and viruses. They are not necessarily enemies. Readers may find these new developments radically change the ideas they have held about viruses since childhood. This book has over 500 references and includes several documents unearthed under Freedom of Information legislation. It has a scientific glossary and is fully indexed.

From the Publisher Janine Roberts has a long history of taking on tough investigations - and this she believes is one of her toughest. Cynthia McKinney, the Green Party candidate for US President in 2008 and former Senior Democrat Congresswoman, said of the author: 'Janine Roberts is the rare individual who unflinchingly speaks truth to power. She battles her way through all obstacles and provides us with a glimpse of those who are in the innermost circles of global power... She exposes what they do and how they do it and how it comes to hurt us all. She gave testimony for me at a Hearing in Congress that was shocking in its revelations but thorough in its documentation... I count myself among the privileged of this world to know Janine and her works.' Dr Roberto Giraldo reported of this book that it is written 'in elegant detail and in a most accessible manner'. He also said: 'It is very comforting to read in Fear of the Invisible: 'We have all been taught to greatly fear viruses - yet scientists are now discovering that they are fundamental parts of life, made by the million by all healthy cells. I hope this book will help by combating this fear, this damning of the invisible because we do not understand it. Without this fear, hopefully the focus in medical research will shift to looking more at the environmental toxins that really do put us, and our world, gravely at risk.' About the Author Janine Roberts is an international investigative journalist of some 40 years standing, during which time she has written for major newspapers in the UK and Australia, authored historical and investigative books and made investigative films seen on US, UK and Australian television.
