Richard A. Polin, William W. Fox, Steven Abman : Fetal and Neonatal Physiology 2 Vol. set before purchasing it in order to gage whether or not it would be worth my time, and all praised Fetal and Neonatal Physiology 2 Vol. set:

0 of 0 people found the following review helpful. Four StarsBy CorsairGood reference text

The new 3rd Edition of Fetal and Neonatal Physiology is today's most encyclopedic, in-depth compendium of knowledge on the normal and abnormal physiology of the foetus and neonate. Over 270 international authorities detail the unique characteristics that distinguish foetal and neonatal physiology from the physiology of adults - and, where appropriate, address the pathophysiology and clinical management of selected neonatal diseases. Each chapter extensively revised and bibliographies updated Clinical correlation chapters help the reader measure the impact that their understanding of physiology can have on the outcome of a sick newborn or premature infant This exhaustive text of basic research can aid in preparation for neonatology board exam 33 new chapters, including chapters on molecular

genetics, extracellular matrix and embryogenesis, apoptosis, and angiogenesis. An expanded section on the placenta and interuterine growth that includes new discussions of the pathophysiology of preterm birth fetal and maternal responses to intrauterine inflammation and maternal vascular disease and fetal development. Clinical correlation chapters that help you measure the impact that your understanding of physiology has on the outcome of a sick newborn or premature infant. Full chapter coverage of The Biology of Stem Cells Pathophysiology of Pre-Term Birth Fetal Origins of Adult Diseases Physiology of Lactation and Angiogenesis. Fresh perspectives from new co-editor, international authority Steven Abman, MD.

"The Third edition of Fetal and Neonatal Physiology represents a substantial enhancement of the second edition... The more than 300 contributors are a distinguished group of international scientists and clinicians, well recognized in their respective fields for their expertise and contributions to perinatal and neonatal medicine. Despite the multi-authored nature of the book, the chapters flow well and the style is consistent, for which the editors should be highly commended... Fetal and Neonatal Physiology is a gold standard reference text that should be on the shelves of libraries wherever perinatal or neonatal medicine is practiced." JAMA, July 28, 2004-vol 292, No 4
About the Author: Richard A. Polin, MD, Professor of Pediatrics, Columbia University College of Physicians and Surgeons; Director, Division of Neonatology, Children's Hospital of New York, New York, NY; William W. Fox, MD, Professor of Pediatrics, University of Pennsylvania School of Medicine, Division of Neonatology, Children's Hospital of Philadelphia, Philadelphia, PA; and Steven H. Abman, MD, Professor of Pediatrics, University of Colorado School of Medicine, Division of Pediatric Pulmonary and Critical Care Medicine, The Children's Hospital, Denver, CO
