I recommend any book in the made incredibly easy series to any health student. I am a current medical student, and love ordering a couple of these to read over my breaks. This book clearly and easily explains how electrolytes function in your body, and some basic science behind it ( don't worry, it doesn't dive in that deep into the science part, no lipid membranes or atp driven transport proteins ; ) ). I would recommend this book to anyone wanting to get a little deeper understanding of how fluids and salts effect the body. 0 of 0 people found the following review helpful. Easy format By marybeth Great info organized into easy format. 4 of 5 people found the following review helpful. Wonderful Product By keviethedreamer I'm a second year nursing student

and am not the over-the-top all A student that some people seem to be. When I first began studying nursing I was lucky to get a C. So naturally when I heard word of the dreaded "fluid and electrolytes" exam, I freaked! Everybody says that this will be the hardest exam you will ever face as a nursing student, and when it came time for lecture I could see why. There was so much material to cover and soooooo much studying to be done. I was afraid that I would fail miserably come exam time, and I already have some of the "nursing made incredibly easy" books. I love them because they make key nursing points so simple. One day while studying, it dawned on me: "I wonder if there's a Fluid Electrolytes Made Incredibly book out there somewhere?" Luckily I found this on here and paid for next-day shipping!! It was well worth the money => I read the majority of this book in a week, and it made what I was studying from my notes so easy to understand, especially when it came to diffusion, osmosis, and activated transported. I only missed 8 questions on my exam out of 60, an 86%. I was proud of myself, and if you are a nursing student like me who needs everything broken down into simple terms, do yourself a big favor and buy this book! You'll be thankful you did, you deserve to pass!! =>
