**Bernard Rosner : Fundamentals of Biostatistics** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Fundamentals of Biostatistics:

Check the local library then buy it! By Dr. L. Noel Stipkovich If you want a biostatistics text that is difficult to read, poorly laid out and impossible to understand I suggest you buy this book. I did and returned it quickly. A reference text that is better suited for the beginner and serious student would be the Dawson-Saunders, Trapp text Basic Clinical Biostatistics, 1st or 2nd edition

This edition of Rosner's text offers a mastery of methods most often used in medical research, with specific reference to actual medical literature and actual medical research. The approach minimizes mathematical formulation, yet gives complete explanations of all important concepts. Every new concept is systematically developed through completely worked-out examples from current medical research problems. Computer output is used to illustrate concepts when appropriate.

About the Author Bernard Rosner is Professor in the Department of Medicine, Harvard Medical School, and the Department of Biostatistics at the Harvard School of Public Health. Dr. Rosner's research activities currently include longitudinal data analysis, analysis of clustered continuous, binary and ordinal data, methods for the adjustment of

regression models for measurement error, and modeling of cancer incidence data.
