Great little book, must have in your med-surg rotation By Indiana Cat Gives pathophysiology, complications, signs and symptoms, diagnostic tests used to identify the problem, treatment, and special age-alerts that explains age related problems from pediatric to elderly. Great diagrams and

charts that compare similar or often confused illnesses (such as Hepatitis A, B, C, D, E; tells incubation time, onset, age group most affected, transmission, severity, prognosis, progression to chronicity). Nice black and white illustrations plus 16 pages of color illustrations. Chapters are (1) Fundamentals of Pathophysiology, (2) Cancer, (3) Infection, (4) Genetics, (5) Fluids and Electrolytes, (6) Cardiovascular System, (7) Respiratory System, (8) Nervous System, (9) Gastrointestinal System, (10) Musculoskeletal System (11) Hematologic System, (12) Immune System, (13) Endocrine System, (14) Renal System, (15) Sensory System, (16) Integumentary System, (17) Reproductive System plus an appendix of less common disorders and their causes, pathophysiology, and sign and symptoms. All this in a small, easy to carry, size. The leather cover keeps it as nice as a hard cover book. This is one of my best buys in nursing school. 0 of 0 people found the following review helpful. Very Helpful

If you are going to school or are working in the medical field I think you will find this book to be very helpful. It is easily searchable and is not bogged down with irrelevant information. 5 of 5 people found the following review helpful. A Godsend for a nursing student  
By Mikki58  
This is a very basic, to the point and extremely helpful little book. I can take it with me to clinicals and it helps me do my disease process sheets. It is interesting to read, so I am actually learning from it!! It is a great book for nursing students (I am in my first year).

This carry-along reference addresses the development and progression of disease. Readers master the basic principles and processes of health and disease and how more than 400 individual diseases affect the human body. Causes, pathophysiology, complications, signs and symptoms, and treatments are reviewed for each disease. Also included are separate entries on body-system anatomy and physiology. More than 100 illustrations and flowcharts clarify key concepts. Content includes fundamentals of cell homeostasis, cancer, infection, genetics, and fluids and electrolytes; cardiovascular, respiratory, nervous, gastrointestinal, musculoskeletal, hematologic, immune, endocrine, reproductive, renal, integumentary, and sensory systems; appendices, including a 16-page full-color section on the pathophysiology of selected diseases; an index and more.
