J. M. McPartland, R. C. Clarke, D. P. Watson : Hemp Diseases and Pests: Management and Biological Control (Cabi) before purchasing it in order to gage whether or not it would be worth my time, and all praised Hemp Diseases and Pests: Management and Biological Control (Cabi):

0 of 0 people found the following review helpful. Five StarsBy Mr. CloneNice2 of 2 people found the following review helpful. Five StarsBy pleasebafairThis book contains all the information that you couldn't find in a Rosenthal or Cervantes book.0 of 0 people found the following review helpful. Mess w my plants now you lil buggers! Thanks

...By JBRMess w my plants now you lil buggers!Thanks to Sam Skunkman aka David Watson Robert Connel Clark for putting this together just for me.

Hemp is enjoying a worldwide resurgence. This unique book combines a review of the hemp pest and disease literature published over the past 50 years with up-to-date information on modern biological control techniques. Each pest and disease organism is presented in the same format, covering economic impact, geographical and host-plant range, plant symptoms, taxonomic description, life history, and differential diagnosis. Important cultural, mechanical, biological and chemical controls are highlighted with charts, illustrations and explicit instructions. Easy-to-use keys are included for rapid identification of the most common pests. Introductory chapters describe the general principles of plant protection, requirements for healthy plant growth, and taxonomy of parasites and pathogens.

"Spending several years on this project, McPartland et al have produced a useful and beautiful tome. Their work combines a review of the relevant literature published over the past half century with modern information on biological control techniques (the 22-page bibliography might be worth the cost of the book itself to some). Each pest and diseases organism is presented in similar, encyclopaedia-style format. Entries cover factors like economic impact, geographical and host-plant range, plant symptoms, taxonomic description, life history, and differential diagnosis. Excellent line drawings and photographs (including 86 colour plates) complement the information. As well, introductory chapters describe general principles of plant protection, requirements for healthy plant growth and the taxonomy of parasites and pathogens. ... Thorough, colourful and engrossing, Hemp Diseases and Pests is a hemp publishing event. Recommended."--The Hemp Commerce Farming Report
About the Author
J. M. McPartland is at the University of Vermont, USA.
R. C. Clarke is at the International Hemp Association, The Netherlands.
D. P. Watson is at HortaPharm B.V., The Netherlands.
