Arie J. Zuckerman, Colin R. Howard : Hepatitis Viruses of Man (Experimental virology) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Hepatitis Viruses of Man (Experimental virology):

Hepatitis Viruses of Man covers the advances and developments in the study of viral hepatitis. The book discusses the history, epidemiology, and clinical features of viral hepatitis; the nomenclature and morphology of hepatitis viruses

and their antigens; and the pathology of the liver in acute viral hepatitis. The text also describes the biochemical and biophysical properties of hepatitis B surface antigen; the nature and immunopathogenesis of hepatitis B; and the laboratory tests for hepatitis B surface antigen and antibody and hepatitis B core antigen and antibody. The carrier state; maternal transmission of hepatitis B and neonatal infection; and Hepatitis B virus and primary liver cancer are also considered. The book further tackles the laboratory tests for hepatitis A and the nature of the virus; immunization against hepatitis; and interferon and antiviral therapy in chronic hepatitis B infection. Microbiologists, pathologists, and medical doctors will find the book useful.
