**Bertil Gustafsson : High Order Difference Methods for Time Dependent PDE (Springer Series in Computational Mathematics)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised High Order Difference Methods for Time Dependent PDE (Springer Series in Computational

Mathematics):

This book covers high order finite difference methods for time dependent PDE. It gives an overview of the basic theory and construction principles by using model examples. The book also contains a general presentation of the techniques and results for well-posedness and stability, with inclusion of the three fundamental methods of analysis both for PDE in its original and discretized form: the Fourier transform, the energy method and the Laplace transform.

From the reviews: "This book presents the theory and construction principles of high order finite difference methods (FDM) for numerical solving of time dependent partial differential equations. Many types of finite difference schemes are completely studied and numerical experiments and graphs are presented. The book is written in a clear and comprehensive manner. It is recommended to researchers, PD students and readers interested in effective methods for numerical solving of partial differential equations." (Snezhana Gocheva-Ilieva, Zentralblatt MATH, Vol. 1146, 2008)
