**From IRL Press :** Histocompatibility Testing: A Practical Approach (Practical Approach Series) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Histocompatibility Testing: A Practical Approach (Practical Approach Series):

0 of 0 people found the following review helpful. Five Stars By AD Amazing book I love it very detailed.

Successful transplantation depends on the minimization of immunological differences between the donor and recipient tissues. These differences are based on polymorphisms of the human major histocompatibility complex and play a key role in determining the acceptance or rejection of allografts during transplantation. This important work describes methods for the investigation of these polymorphisms at the gene and protein levels and their application to the clinical transplantation of human organs and bone marrow. There is currently no other text available covering these up-to-date serological and molecular techniques in this area of immunogenetics, despite their importance to fundamental research, clinical practice and forensic medicine.

'a very useful book and one might safely predict that it will become a standard text on the practical aspects of histocompatibility testing' J. Andrew Bradley, Western Infirmary, Glasgow, *Immunology Today*, Vol. 15, No. 6, 1994  
About the Author Philip Dyer, Doctor, Northwest Regional Tissue Typing Laboratory, Manchester. Derek Middleton, Doctor, Tissue Typing Laboratory, City Hospital, Belfast.
