From Springer : Steroid Hormones and the T-Cell Cytokine Profile before purchasing it in order to gauge whether or not it would be worth my time, and all praised Steroid Hormones and the T-Cell Cytokine Profile:

The fact that certain adrenal steroid hormones are immunosuppressive and anti-inflammatory has been known for many years. However, new information has led to the possibility of immunoregulatory steroids being used by physicians in

novel ways. This book details these new therapies which could revolutionise the treatment of certain Th2-mediated diseases such as asthma. It provides an overview of these new concepts, starting with how the immune response triggers adrenal steroid production and finishing with in vivo models of infection and autoimmunity that demonstrate the clinical importance of these new insights into the physiological control of glucocorticoid function. The information contained is mostly very new, some of it previously unpublished, and will open up new horizons for immunologists, endocrinologists, physiologists, cell biologists and clinicians.
