From Wiley : Textbook of Clinical Trials before purchasing it in order to gage whether or not it would be worth my time, and all praised Textbook of Clinical Trials:

0 of 0 people found the following review helpful. Five StarsBy gerardo i. hurtadoThanks,

A comprehensive volume on clinical trials that covers all important disease and therapeutic areas together with methodologies, phase I/II/III studies and other issues. The volume catalogues the impact of clinical trials on the practice of medicine and discusses the developments and practice of medical statistics. Cancer, cardiovascular disease, dermatological, dental, mental, ophthalmic health, gynaecology and respiratory diseases are all discussed in separate chapters, with discussions on outcome measures, competing risks and statistical models given for each therapy area. It also presents: * A history of clinical trials * A summary of pertinent statistical issues * How to choose a clinical trial design * Ethical constraints and considerations * Clinical trial issues in paediatrics and those involving older patients *

Clinical trials in complementary medicine

very useful as an introduction to clinical research, or for those planning specific studies within therapeutic or disease areas. (British Journal of Surgery, Vol.92, No.2, February 2005) "a very interesting book" (Applied Clinical Trials, July 2004) From the Back Cover Textbook of Clinical Trials highlights the varied ways that clinical trials particularly randomised controlled trials have influenced the practice of medicine in many therapeutic areas. It describes the challenges posed by those conducting clinical trials over a range of medical specialities and allied fields and blends the development of clinical trial statistical methodology into this process. Uniquely this Textbook addresses issues as they impact on patients with diseases in the following specific areas: Cancer Cardiovascular disease Complementary medicine Respiratory disease Dermatology Dental disease and disorders Mental health Alzheimers Disease Reproductive health Gynaecology In addition, chapters deal with special issues in children and older patients. This is an essential reference for all involved with clinical trials. It will be of particular relevance to clinical trialists, whether with administrative, data management and quality, scientific or statistical roles, workers in the pharmaceutical industry, those who sit on ethics committees, work in regulatory departments or grant awarding bodies and doctors taking part in the conduct of clinical trials. Pragmatic and readable Draws together critical information in one key text About the Author David Machin, Division of Clinical Trials and Epidemiological Sciences, National Cancer Centre, Singapore. Simon Day, Medicines and Healthcare Products Regulatory Agency, London, UK. Sylvan Green, Arizona Cancer Center, Tucson, Arizona, USA.
